## Abstracts

Sodium acetate crystal is an organic substance mainly composed of sodium acetate ( $\text{CH}_3\text{COONa}$ ), which is easily soluble in water and ethanol, but insoluble in ether. It has the smell of acetic acid. Hydrolysis is generally divided into sodium acetate trihydrate and sodium acetate anhydride, which are widely used in industries such as food, sewage treatment, textiles, and pharmaceuticals. In terms of global consumption, the Asia-Pacific region is the world's largest sodium acetate consumer market, especially China and India. China is not only the largest producer of sodium acetate, but also the largest consumer. With the development of China's economy, especially the continued growth of food processing, medicine, chemical and other industries, the market demand for sodium acetate will continue to increase. China's strong market demand and low production costs make China an important global production base for sodium acetate. China's industrial chain is relatively complete, and localization can be achieved from raw materials to finished product production. The European and North American markets occupy an important position in sodium acetate consumption, especially in the fields of food, medicine and water treatment. Although the growth rate of these markets is relatively slow, the high-end demand and stable market environment of the market provide manufacturers with a reliable source of profit.

The global Sodium Acetate Crystal market size was estimated at USD 310.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
