Report Overview

Sodium caseinate is a water-soluble derivative of casein, the primary protein found in milk, produced by treating casein with sodium hydroxide. It is widely used as a functional ingredient in the food and beverage industry due to its emulsifying, stabilizing, and thickening properties, making it a key component in products such as processed cheese, coffee whiteners, protein supplements, and baked goods.

The global sodium caseinate market is driven by increasing demand for protein-fortified foods, growth in the dairy and sports nutrition sectors, and its application in vegan and vegetarian alternatives. However, factors such as fluctuating milk prices, stringent food safety regulations, and competition from plant-based proteins like soy and pea protein may pose challenges. Geographically, North America and Europe dominate the market due to high consumption of dairy products and functional foods, while the Asia-Pacific region is experiencing rapid growth due to rising health awareness and disposable income. Key players in the industry focus on product innovation and sustainable sourcing to maintain competitiveness.

The global Sodium Caseinate market size was estimated at USD 347.88 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
