## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sodium Citrate Solution for Anticoagulation competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sodium citrate solution for anticoagulation is specifically used for extracorporeal anticoagulation in source plasma collection. The principle of regional citrate anticoagulation involves the infusion of sodium citrate at the arterial end of the extracorporeal circulation, where it chelates plasma calcium ions to form soluble and poorly dissociable calcium citrate. This process significantly reduces ionized calcium levels in the extracorporeal circuit, thereby inhibiting the conversion of prothrombin to thrombin and preventing blood clotting within the dialyzer and tubing. Meanwhile, calcium supplementation through a peripheral artery ensures stable ionized calcium levels and normal coagulation function in the body. In clinical practice, sodium citrate anticoagulation is considered the preferred option for continuous renal replacement therapy (CRRT), as it carries a lower bleeding risk compared to heparin, reduces the incidence of heparin-induced thrombocytopenia (HIT), and demonstrates excellent biocompatibility. In 2024, the global average price of Sodium Citrate Solution for Anticoagulation is US\$1.8 per unit, with a total sales volume of 108 million units.

The global Sodium Citrate Solution for Anticoagulation market size was estimated at USD 194.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
