Abstracts

Sodium Cyanide is an inorganic compound with the formula NaCN. Sodium Cyanide, a white, water-soluble solid, is a kind of important basic chemical raw materials. Cyanide has a high affinity for metals, which leads to the high toxicity of this salt. When it is treated with acid, it forms the toxic gas hydrogen cyanide. The sodium cyanide market is primarily driven by its significant role in the mining industry, particularly in gold and silver extraction processes. Sodium cyanide is used in a process known as cyanidation, where it forms a soluble complex with metals like gold, allowing for efficient metal recovery. This makes the mining sector the largest consumer of sodium cyanide, with the growing demand for precious metals bolstering the market. Key factors driving the sodium cyanide market include increasing gold mining activities due to rising gold prices and the expansion of the mining industry in regions like North America, Asia-Pacific, and Africa. Environmental regulations related to cyanide use and disposal are also shaping the market, pushing companies to adopt more sustainable practices. However, the market faces challenges such as the toxicity of sodium cyanide and the stringent environmental regulations surrounding its use, transportation, and disposal. Companies are under pressure to develop safer alternatives and improve handling practices to reduce the risk of accidents and contamination. Regionally, the sodium cyanide market is dominated by countries with significant mining industries, such as China, Australia, South Africa, and the United States. These regions have well-established supply chains and production facilities to meet the demand for sodium cyanide.

The global Sodium Cyanide market size was estimated at USD 2423.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
