## Abstracts

Sodium-ion battery is a secondary battery (rechargeable battery) that mainly relies on the movement of sodium ions between the positive and negative electrodes to work, similar to the working principle of lithium-ion batteries. Sodium-ion batteries are a new technology that has emerged in recent years and are expected to partially replace lithium batteries. Market News Mar 28, 2025 Zoolnasm has reached a strategic cooperation with Zhiliang New Materials, a domestic technology-leading battery material company. The two parties will carry out in-depth cooperation on the integrated application of lithium battery positive electrode materials and sodium iron sulfate (NFS) positive electrode materials, jointly promote the material research and development, battery cell development, market verification and promotion of new lithium-sodium fusion battery systems, and jointly promote 5GWh new battery products to enter relevant markets in the next three years. This cooperation is not only another original technological breakthrough of Zoolnasm and its partners in the field of sodium iron sulfate batteries, but also one of the important innovative explorations in the underlying battery technology after the domestic new energy industry entered the second half.
