Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sodium-ion Battery competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sodium-ion battery is an emerging product in the field of energy storage and power battery, which has been favored by the industry for its lower cost energy storage advantages and safer performance. Sodium-ion batteries are a type of rechargeable battery that work in a similar way to lithium batteries, but carry the charge using sodium ions (Na⁺) instead of lithium ions (Li⁺). Sodium is a silvery, soft alkaline metal that is very abundant in nature - it can be found, for example, in sea salt or in the earth's crust. The operation of sodium-ion batteries is very similar to that of lithium-ion batteries, as the chemistry of the two elements is similar (both are alkaline). Sodium batteries were first studied in the 1980s, but it was not until the 21st century that the true potential of sodium for energy storage was rediscovered. The global key players of Sodium-ion battery include Natron Energy, Reliance Industries, Tiamat Energy and HiNa Battery Technology, etc. The global top five players had a share approximately 65% in terms of revenue. At present, the global sodium-ion battery is in the investment and construction stage. The construction of the sodium-ion battery industry chain was just completed around 2022, and since then, both production capacity and output have increased significantly. In 2024, the global sodium-ion battery market growth rates will be 94.5%, and will continue to grow rapidly thereafter. However, most corporate investment and construction investment are currently concentrated in China, mainly due to government policy support and a mature lithium-ion battery industry chain. The principles of sodium-ion batteries and lithium-ion batteries are basically the same, and many sodium-ion battery companies are also manufacturers of lithium-ion batteries.

The global Sodium-ion Battery market size was estimated at USD 368.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 38.30% during the forecast period.
