Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sodium L-glutamate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sodium L-glutamate is the monosodium salt of the naturally occurring acidic amino acid L-glutamic acid, with the molecular formula $C_5H_9NO_4Na$. It is the main ingredient in MSG. It appears as white crystals or a crystalline powder, is readily soluble in water, and has a strong umami flavor. It is a non-essential amino acid for the human body and is involved in protein synthesis and amino acid metabolism. Sodium L-glutamate is widely used as a food flavor enhancer, added to condiments, soups, and convenience foods to enhance flavor. Its umami flavor is most pronounced at a pH of 6-7. It is converted into α -ketoglutarate in the body, which enters the tricarboxylic acid cycle and participates in energy metabolism. It is highly safe and has been rated "Generally Recognized as Safe" (GRAS) by international authorities such as the FDA and JECFA. In 2024, the global production of monosodium L-glutamate will reach 732,080 tons, with an average selling price of US\$4,306 per ton.

The global Sodium L-glutamate market size was estimated at USD 3152.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
