Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sodium Laureth Sulfate for Personal Care competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sodium Laureth Sulfate (SLES) is an anionic surfactant widely used in personal care products for its effective cleansing and foaming properties. Derived from ethoxylated lauryl alcohol, SLES is commonly found in shampoos, body washes, facial cleansers, and toothpastes. It effectively removes dirt and oils from the skin and hair, creating a rich lather that enhances the user experience. Compared to Sodium Lauryl Sulfate (SLS), SLES is milder and less irritating, making it suitable for most skin types, including sensitive skin. However, some individuals may experience irritation, so it's important to consider personal skin sensitivity when using products containing SLES.
