Abstracts

Sodium lauroyl isethionate (SLI) is a mild surfactant used in various personal care applications. Sodium lauroyl isethionate exhibits excellent detergency properties. It is also used as a cleansing agent in several applications such as shampoos, facial care products, body washes, and toothpastes. However, it can be harmful to the skin and can cause irritation when used in higher concentrations or quantities above the standard limits. Sodium lauroyl isethionate is formulated by using fatty acids combined with isethionic acid. Isethionic acid is derived from sodium bisulfite and aqueous solution of ethylene oxide. However, ethylene oxide is a carcinogenic substance. This may act as a restraining factor for the market.

The global Sodium Lauroyl Isethionate market size was estimated at USD 68.85 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
