Abstracts

Sodium polystyrenesulfonate is a synthetic polymer derived from polystyrene through sulfonation, forming a highly water-soluble, anionic polyelectrolyte with a strong affinity for cations. It is primarily utilized as a cation exchange resin, particularly in medical applications as a potassium-binding agent to treat hyperkalemia, and in industrial settings for water treatment, purification processes, and as a dispersant or stabilizer in formulations such as coatings, textiles, and agriculture. Its functionality stems from its ability to selectively bind and remove positively charged ions, making it valuable in both healthcare and technical industries where ion exchange or specific ionic interactions are required.

The global Sodium Polystyrenesulfonate market size was estimated at USD 410.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
