Report Overview

Sodium Pyrrolidone Carboxylate is the sodium salt of pyroglutamic acid (also known as PCA). PCA is a naturally occurring component of human skin and a part of the 'natural moisturizing factors' (NMF) that maintain a healthy epidermis. Sodium Pyrrolidone Carboxylate is very hygroscopic, attracting moisture from the air. It imparts a moist feeling to hair and skin. Sodium Pyrrolidone Carboxylate applied to the skin is absorbed to a limited extent. It is non-comedogenic, nonirritating to the eye and skin -- even at concentrations up to 50%, and does not contribute to phototoxicity or sensitization. It is rapidly biodegradable. Soluble in water and ethanol and insoluble in oils, it is used for its powerful humectant properties in many skin and hair care products including gels, creams, lotions, shampoos, conditioners, lipsticks and foundations.
