Report Overview:

Stranded copper wire refers to a new type of composite wire made of low-carbon steel as the core, processed by copper plating, and twisted into a number of single wires according to certain rules. Copper stranded wire is a flexible connecting wire for power transmission and distribution, electrical devices (such as transformers, electric furnaces), electronic and electrical equipment, and thyristor components. In addition, copper stranded wire can also be used for electrical work ground wire. The copper stranded wire is realized by the stranded single wire wound around the stranded wire shaft at the same angular speed and the stranded wire moving forward at a uniform speed. Copper stranded wire can be divided into two types: hard copper stranded wire and soft copper stranded wire.
