## Abstracts

Soft emergency cervical collars are medical devices designed to provide temporary support and immobilization of the cervical spine (neck) in the event of a potential neck injury or trauma. Soft cervical collars are used to immobilize the cervical spine and restrict neck movement. They are often used when there is a suspected neck injury, such as after a car accident, fall, or sports injury, until further evaluation can be performed. These collars are typically made of soft, pliable materials and are used in emergency medical situations to stabilize the neck and prevent further damage to the spine. These collars are made from soft foam or padded materials that are gentle on the skin and comfortable for the patient to wear. They are not rigid like some other types of cervical collars.

The global Soft Emergency Cervical Collars market size was estimated at USD 116.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
