Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Soft Magnetic Composite Heaters competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Soft Magnetic Composite (SMC) Heaters are advanced electromagnetic heating devices that utilize soft magnetic composite materials?typically made from iron powder particles coated with an insulating layer?to achieve efficient, localized induction or magnetic hysteresis heating. These heaters benefit from the unique properties of SMCs, such as high magnetic permeability, low eddy current losses, and isotropic magnetic behavior, enabling high-frequency operation with reduced energy loss and improved thermal control. SMC heaters are particularly suited for compact designs in electric motors, induction heating systems, and electromagnetic processing equipment where precise and uniform heating is critical. Their high electrical resistivity and tailored magnetic properties make them ideal for applications demanding energy-efficient and fast-response heating.

The global Soft Magnetic Composite Heaters market size was estimated at USD 894.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
