Report Overview:

Soft Magnetic Powder Cores consist of soft-magnetic metallic powder, mostly iron and its alloys (mixed with nickel, molybdenum, silicon and others), embedded in a binder material. The powder mix is pressed into desired shapes, but as it is not sintered, grains stay isolated. As a result, all these cores contain a so-called distributed air gap resulting in low permeability and soft saturation behaviour. The different compositions of powder, grain size and densities of the particles within the core allow for a wide range of permeability (10 to 550) and other material properties.

The Global Soft Magnetic Powder Core Market Size was estimated at USD 857.46 million in 2023 and is projected to reach USD 2056.91 million by 2029, exhibiting a CAGR of 15.70% during the forecast period.
