Abstracts

The soft rock shield machine is a specialized type of tunnel boring equipment designed for excavating stable, non-abrasive geological formations such as clay, silt, shale, and other cohesive soils with low to medium strength, utilizing a rotating cutterhead to bore through the ground while simultaneously installing precast concrete segments to form the tunnel lining; these machines are characterized by their ability to operate in softer ground conditions without the need for extensive ground stabilization, making them distinct from hard rock TBMs which require different cutting mechanisms and are built to withstand higher abrasive forces and compressive strengths.

The global Soft Rock Shiled Machine market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
