Abstracts

The soft shackle is a device made of 12 strands of rope, which forms a closed loop and can be opened by using a lasso and a large plug knot. These rope shackles are designed to reduce weight and have been used in many racing boats. But for classic yachts and sailors, these shackles also have advantages over metal Shackles: when connected to lifting ropes and sails, they can reduce the risk of injury and protect the mast surface. Under load, they are reliably pulled together and will not be accidentally opened.

This report offers a comprehensive and in-depth analysis of the global Soft Shackle market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
