## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Soft Termination Capacitors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Soft-terminated capacitors are multilayer ceramic chip capacitors (MLCCs) that have a conductive resin layer between the copper and nickel plating of their terminals. The resin layer acts as a buffer, absorbing stress caused by temperature changes, bending, and other mechanical forces that can cause the capacitor to crack. This design improves the reliability and durability of the capacitor, making it suitable for applications where the capacitor is subjected to great stress, such as automotive electronics.

The global Soft Termination Capacitors market size was estimated at USD 1915.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.40% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Soft Termination Capacitors market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
