Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Soft Termination MLCC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. With the development trend of miniaturization and high density of electronic products, the application of chip multilayer ceramic capacitors (MLCC) is becoming more and more extensive. However, high temperature and high humidity environment poses a severe challenge to the reliability of MLCC. Soft terminal MLCC is a special chip capacitor with flexible connection terminals. Through the design of flexible terminal electrodes, soft materials with conductive properties are introduced as connection terminals, which can play a certain protective role on the capacitor body, so that its quality and performance are not affected when the assembly substrate is bent and deformed, and the common mechanical stress fracture problem of traditional chip capacitors is effectively solved, thereby providing MLCC with better mechanical reliability and vibration resistance. The Cu layer of the ordinary MLCC terminal electrode is plated with Ni and Sn. The soft terminal MLCC is a resin layer structure added after the copper layer of the ordinary MLCC, and then plated with Ni and Sn, using a special four-layer terminal electrode structure design. Soft terminal MLCC is the best solution to solve MLCC stress fracture. Its special high reliability, good mechanical stress resistance and thermal shock resistance can effectively prevent vibration cracks. It is suitable for electronic circuits with high bending and severe vibration that are susceptible to mechanical stress and thermal stress. Therefore, it is mainly used in high-safety and high-reliability design circuits with strict quality requirements. The application areas of soft terminal MLCC are mainly concentrated in automotive electronics, industrial control equipment, communication equipment, mobile electronic products, and are also used in medical equipment, inverters, TFT-LED inverters, etc.

The global Soft Termination MLCC market size was estimated at USD 1915.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.40% during the forecast period.
