Soft Tissue Release System (STR) refers to a manual therapy technique and associated devices used by healthcare professionals, particularly in sports medicine, physical therapy, and chiropractic care, to treat myofascial pain, improve flexibility, and address soft tissue dysfunction. The system involves applying targeted pressure and tension to muscles, tendons, ligaments, or fascia while the patient actively moves the affected area, aiming to break down adhesions, release tension, and restore normal tissue function. STR can be performed using specialized tools?such as handheld instruments with ergonomic designs and varying pressure tips?or through manual methods, with the goal of enhancing rehabilitation outcomes, reducing recovery time, and preventing injuries.

The global Soft Tissue Release System market size was estimated at USD 450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
