Abstracts

Soft tissue sarcoma drugs encompass a range of targeted and systemic therapeutic agents designed to treat malignant tumors arising from the body's connective tissues, including muscles, fat, nerves, blood vessels, and other supportive structures. These pharmaceuticals include chemotherapy agents such as doxorubicin and ifosfamide, targeted therapies like pazopanib and imatinib that inhibit specific molecular pathways involved in sarcoma proliferation, and immunotherapies that harness the immune system to combat tumor growth. Treatment strategies are often tailored to the histological subtype, tumor grade, and stage of disease, with an emphasis on improving survival rates, managing metastatic spread, and preserving quality of life for patients. The development of these drugs is driven by advances in molecular profiling and a deeper understanding of sarcoma biology, aiming to address the heterogeneity and relative rarity of these cancers which pose significant clinical challenges.

The global Soft Tissue Sarcoma Drugs market size was estimated at USD 1255.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
