Report Overview

A softwall cleanroom is a type of cleanroom that is enclosed by flexible vinyl curtains or panels rather than rigid walls. The vinyl curtains are designed to be highly durable, easily cleaned and provide a barrier against particulate contaminants. They are commonly used in industries that require controlled environments such as pharmaceuticals, biotechnology, and electronics.

Softwall cleanrooms are less expensive than hardwall cleanrooms and can be easily installed and reconfigured as needed. They also allow for easier access to equipment and materials because the vinyl curtains can be easily opened and closed.

Softwall cleanrooms can be customized to meet specific requirements such as temperature, humidity, and air filtration. They can also be designed to meet specific cleanliness standards such as ISO 14644 or US Federal Standard 209E. Softwall cleanrooms are typically used for less stringent applications, such as research and development, testing, and packaging.
