Abstracts

A Software Bill of Materials (SBOM) is a structured list of all components, libraries, and modules included in a software product. It includes information about each component's version, origin, and dependencies. SBOMs are essential for supply chain security, software vulnerability management, and regulatory compliance. Rising cybersecurity threats: Frequent software supply chain attacks are driving companies to adopt SBOMs to improve visibility and security controls. Increased compliance requirements: For example, Executive Order 14028 in the United States requires that federally procured software must be accompanied by an SBOM. Widespread use of open source software: Modern applications rely heavily on open source components, and SBOMs help identify and manage related risks. Trend toward automated integration: SBOM generation is increasingly integrated into the DevSecOps tool chain, such as tools such as Syft, CycloneDX, and SPDX. Accelerated standardization: Standards such as SPDX and CycloneDX are gaining popularity around the world, driving the unification of SBOM formats.

The global Software Bill of Materials (SBOM) market size was estimated at USD 1318.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 24.00% during the forecast period.
