Abstracts

Software bill of materials (SBOM) solutions generate, ingest, manage, and monitor a machine-readable inventory of the components within software supply chains. The components covered include libraries, packages, modules, associated licenses, and more. Companies and developers use SBOM software to deliver and annotate comprehensive SBOMs for their software's third party and open source components. These solutions allow users to comply with government mandates that require the provision of a minimum SBOM. Maintaining and monitoring SBOMs also helps companies perform continuous risk assessments, though vulnerability remediation is not the primary focus of such tools. Software composition analysis (SCA) tools scan software supply chains' components and dependencies at the code level to identify and remediate security vulnerabilities, whereas SBOM software automates the standardized presentation of those elements for transparency, observability, and compliance. Software Bill of Materials (SBOM) software is becoming increasingly essential in ensuring supply chain transparency, security, and compliance. As regulations around software supply chains tighten, SBOM tools help organizations track and manage the components within their software, identify security vulnerabilities, and ensure compliance with industry standards. The adoption of SBOM is growing across various industries, driven by the need for better security, regulatory adherence, and integration into DevSecOps workflows. The trend towards automation and standardization is also enhancing the effectiveness of SBOM software in modern development environments.

The global Software Bill of Materials (SBOM) Software market size was estimated at USD 1403.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 19.60% during the forecast period.
