## Abstracts

Water stress caused by high temperatures can be detrimental to plant growth, especially for small, slow-growing vegetables. Lack of water can mean heat stress for these plants, negatively impacting crop yields. The Soil Moisture Alert device uses Soil Moisture Measurement over Long Range (LoRa) radio frequency technology. The sensor consists of a soil probe and a transmitter that communicates data to a gateway. The probe measures moisture, temperature, and conductivity. The transmitter sends the data to the gateway, which then communicates with the cloud or a remote server. Farmers can use the system to remotely monitor soil moisture and make adjustments to maintain ideal moisture levels for crop planting.

The global Soil Moisture Remote Monitoring System market size was estimated at USD 421.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
