Abstracts

Soilless growing medium, also known as substrate or growth media, refers to any material other than native soil used to support plant growth by providing physical anchorage for roots, facilitating water retention and aeration, and serving as a reservoir for nutrients. Common examples include peat moss, coco coir, perlite, vermiculite, rockwool, and various hydroponic substrates like clay pellets or expanded shale. These materials are engineered to optimize growing conditions by offering greater control over moisture, pH, and nutrient availability compared to traditional soil, making them essential in commercial agriculture, horticulture, hydroponics, aquaponics, and controlled-environment farming systems.

The global Soilless Growing Medium market size was estimated at USD 1850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
