Report Overview

In a solar panel, there's a thin strip of copper or aluminum between cells that conducts electricity which is called Solar Cell Busbar. It separates solar cells which can be seen in a square pattern on the panels and conduct the direct current collected in the cell from solar photons to the solar inverter. It can be as small as 10 mm. In solar panels, busbars are typically flat strips, which allow heat to dissipate more efficiently because of their high surface area to cross-sectional area ratio. Insulators can support busbars
