Solar Concentrated Power System, often abbreviated as CSP, is a type of solar power generation technology that uses mirrors or lenses to concentrate sunlight onto a small area, typically a receiver or heat exchanger. The concentrated sunlight generates high temperatures, which are then used to produce steam or heat a fluid. This high-temperature heat is utilized to drive a turbine and generate electricity, similar to the process in a conventional power plant. The Solar Concentrated Power System market continues to evolve, with a focus on increasing efficiency, reducing costs, and expanding deployment to meet the growing demand for clean and reliable energy sources.

The global Solar Concentrated Power System market size was estimated at USD 6691.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.30% during the forecast period.
