## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solar Digital Caliper competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Solar Digital Caliper is an electronic digital display caliper that uses solar panels to convert light energy into electrical energy. It can work normally when the light intensity is greater than 60 Lux, and the origin setting can be permanently retained even when the display is turned off. Its solar panels adopt a hard coating, which is safer to use and will not cause overspeed errors due to insufficient light. This caliper features functions such as origin setting, data holding, data output, and conversion between imperial and metric systems, and is widely used in industrial measurement fields.

The global Solar Digital Caliper market size was estimated at USD 91.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
