## Abstracts

A Solar Energy Storage System (SESS) is a technology framework designed to capture, store, and dispatch energy generated by solar power installations, primarily photovoltaic (PV) arrays or concentrated solar power (CSP) plants. The system's main purpose is to mitigate the intermittency of solar generation, allowing electricity or heat to be utilized when the sun is not shining (i.e., at night or during cloudy periods). The storage mechanisms typically include electrochemical storage (like lithium-ion batteries for PV systems), thermal energy storage (like molten salt for CSP plants), or less commonly, mechanical storage. SESS solutions are critical for maximizing the use of solar energy, enhancing grid stability, and ensuring reliable power supply for both residential and utility-scale applications.

The global Solar Energy Storage System market size was estimated at USD 1000.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.10% during the forecast period.
