Report Overview

The solar grid-connected inverter is a special inverter. In addition to converting direct current to alternating current, the output alternating current can be synchronized with the frequency and phase of the mains, so the output alternating current can return to the mains. The solar grid-connected inverter feeds back electric energy to the power grid. If the power grid is powered off, it is necessary to quickly cut off the power supply line to the grid to ensure that the grid-connected inverter will also be turned off when the power is off, so as to avoid harming the personnel who maintain the grid. . Grid-tied inverters are commonly used in applications where some DC voltage sources (such as solar panels or small wind turbines) are connected to the grid.
