Abstracts

Solar home lighting systems are self-contained, standalone units that integrate photovoltaic panels, batteries, charge controllers, and LED lighting fixtures to provide off-grid or backup electricity, primarily for residential use in areas with limited or unreliable grid access. These systems are designed to harness solar energy during daylight hours, store it in batteries for use at night or during cloudy conditions, and power energy-efficient lighting and sometimes small appliances like mobile chargers or radios. They range from small, portable lanterns to fixed multi-light setups with separate solar panels, and are characterized by their modularity, ease of installation, and ability to operate independently of centralized power infrastructure. Key components include monocrystalline or polycrystalline solar panels, lithium-ion or lead-acid batteries, PWM or MPPT charge controllers for efficient energy management, and durable, low-power LED bulbs optimized for longevity and brightness. The systems are particularly vital in rural, remote, or disaster-prone regions where extending the conventional electrical grid is economically or logistically challenging, offering a sustainable, cost-effective alternative to kerosene lamps, candles, or diesel generators.

The global Solar Home Lighting System market size was estimated at USD 1250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
