Abstracts

A solar irradiance meter, also known as a pyranometer or solar power meter, is a precision instrument designed to measure the solar radiation flux density (irradiance) in watts per square meter (W/m²) received from the sun within a specified spectral range, typically encompassing the full solar spectrum or specific wavelength bands relevant to photovoltaic or solar thermal applications. It operates by detecting the intensity of sunlight using sensors such as thermopiles or photodiodes, converting the energy into an electrical signal that is then calibrated to provide accurate and repeatable measurements of solar energy availability, which is critical for assessing site feasibility, system performance, and energy yield in solar power projects, agricultural planning, meteorological studies, and research on renewable energy resources.

The global Solar Irradiance Meter market size was estimated at USD 168.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
