## Abstracts

A solar panel aluminum frame is a rigid structural component that surrounds and supports the edges of a solar panel, providing mechanical strength, protection, and ease of installation. Made typically from anodized aluminum, the frame is lightweight, corrosion-resistant, and designed to withstand harsh outdoor environments, including wind, rain, and snow. It not only protects the solar cells and glass from damage but also facilitates mounting the panel to rooftops, ground structures, or tracking systems. Aluminum frames are widely used in residential, commercial, and utility-scale solar installations, making them a standard feature in most photovoltaic (PV) modules due to their durability, affordability, and compatibility with existing racking systems.

The global Solar Panel Aluminium Frame market size was estimated at USD 328.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
