Report Overview

Photovoltaic support is an important part of photovoltaic power station, which plays a supporting role for photovoltaic modules. The main requirement is to ensure the safety, applicability and durability of the support system within the normal power generation period of the photovoltaic system (more than 25 years). Its safety is mainly reflected in the strength of the system, ensuring that the system meets the requirements of wind load, snow load, and earthquake load. The applicability is mainly reflected in the stiffness of the system, which can ensure that the system has sufficient resistance to deformation when it is stressed. Durability is mainly reflected in the ability of the system to withstand the environment within a certain period of time, such as oxidation resistance and corrosion resistance. In addition, the design of the support system should also consider the requirements of convenient installation and easy maintenance.
