Abstracts

Solar powered elevators are vertical transportation systems that utilize photovoltaic (PV) panels to convert sunlight into electricity, which is then used to power the elevator's operation, including its motor, control systems, and lighting, often supplemented by battery storage for uninterrupted functionality during periods of low or no sunlight. This technology represents an integration of renewable energy solutions into building infrastructure, aimed at reducing grid dependence, lowering operational carbon emissions, and enhancing energy efficiency, particularly in green buildings, eco-friendly developments, and regions with high solar insolation. The market for these systems is driven by increasing regulatory pressure for sustainable construction, rising energy costs, and growing consumer and corporate emphasis on environmental responsibility, though adoption is influenced by factors such as initial investment costs, geographic suitability, and advancements in energy storage technology.
