Abstracts

A solar-powered GPS tracker is a location-tracking device that uses solar energy to maintain its power, allowing for extended or continuous operation without frequent battery replacements or recharging. It incorporates a GPS module to determine precise geographic coordinates by receiving signals from satellites and uses communication networks, such as cellular or satellite, to transmit location data to a monitoring platform or mobile device. Equipped with solar panels, the tracker converts sunlight into electrical energy, which recharges the built-in battery, extending the device's lifespan and reducing maintenance needs. Solar-powered GPS trackers are designed for outdoor use in various applications, including tracking vehicles, wildlife, boats, or remote assets, where reliable power sources may be limited. These trackers often feature additional functionalities, such as geofencing, motion detection, and tamper alerts. By harnessing solar energy, they provide a sustainable, low-maintenance solution for long-term monitoring, making them ideal for applications in remote or rugged environments.

Growing Demand for Sustainable Solutions: There is an increasing emphasis on sustainability across industries. The demand for eco-friendly and energy-efficient solutions is likely to drive interest in solar-powered GPS trackers, especially in applications where continuous tracking is essential.

Remote Asset Monitoring: The need for remote monitoring of assets in industries such as agriculture, logistics, and wildlife conservation may drive the adoption of solar-powered GPS trackers. These trackers provide a self-sustaining solution for assets located in areas without easy access to power sources.

Advancements in Energy Harvesting Technology: Ongoing advancements in solar technology and energy harvesting techniques may lead to more efficient and compact solar-powered GPS trackers. Improved energy efficiency can extend operational periods and enhance performance.

Cost-Effective Solutions: As the cost of solar technology continues to decrease, solar-powered GPS trackers may become more cost-effective. This can make them attractive to businesses looking for

economical and sustainable tracking solutions.

The global Solar-powered GPS Tracker market size was estimated at USD 189.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
