Abstracts

Solar-powered portable power devices are compact, mobile power sources that harness solar energy to generate electricity. These devices are equipped with solar panels, which are responsible for converting sunlight into direct current (DC) electricity through the photovoltaic effect. The generated DC power is then either stored in an internal rechargeable battery for later use or, in some cases, converted into alternating current (AC) power using an inverter for immediate application. Solar-powered portable power devices are designed to be easily carried and transported, making them ideal for various off-grid situations such as camping, hiking, emergency power backup, and use in remote areas where access to traditional power sources is limited. They come in a variety of sizes and power capacities, offering users the flexibility to charge a wide range of electronic devices, from smartphones and tablets to small appliances and even some power tools.

The global Solar-powered Portable Power Devices market size was estimated at USD 973.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
