The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solar-Powered Suction Insect Killer Lamp competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Solar-Powered Suction Insect Killer Lamp was approximately 2.7 million units, with an average selling price of about US\$92 per unit. Single-line production capacity was approximately 80,000 units per year, with an average gross profit margin of about 25%. Solar-Powered Suction Insect Killer Lamp is an environmentally friendly insecticidal device that uses solar power and a fan to create negative pressure suction to kill pests. It attracts pests with a specific wavelength of light, then uses the negative pressure airflow generated by the fan to suck the pests into a collection box, ultimately drying or killing them. This device integrates light control, time control, and waterproofing functions, making it suitable for various applications in agriculture, forestry, and horticulture. Upstream industries mainly include core raw materials and electronic components such as solar panels, lithium batteries, fan motors, LED beads, hardware and plastic structural parts, and control circuit boards. Downstream industries are widely used in large-scale planting fields such as field agriculture, orchards, tea gardens, and vegetable bases, and also play an important role in ecological mosquito control in urban parks, communities, and other public green spaces.

The global Solar-Powered Suction Insect Killer Lamp market size was estimated at USD 248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
