## Abstracts

A solar-powered uncrewed surface vehicle is an intelligent watercraft that primarily uses solar energy as its power source and features two core operating modes: remote control and autonomous operation. In the remote control mode, operators can precisely and in real-time regulate its navigation path, speed, and the operation of on-board equipment from an external control center via wireless communication technology. In the autonomous operation mode, the vehicle relies on its on-board sensors to gather environmental information and autonomously plans routes, adjusts its attitude, and executes tasks according to pre-set programs, thus achieving efficient, stable, and intelligent water surface operations.

The global Solar-powered Uncrewed Surface Vehicle market size was estimated at USD 369.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.60% during the forecast period.
