## Abstracts

A solar PV backsheet film is a critical multilayer component located on the rear side of photovoltaic (PV) modules, serving as the outermost protective barrier that shields the internal electrical components?such as solar cells, encapsulation materials, and interconnects?from external environmental factors including moisture, UV radiation, extreme temperatures, and mechanical abrasion. Typically composed of polymer-based laminates (e.g., PET, fluoropolymers, or non-fluorinated composites), the backsheet ensures long-term electrical insulation, prevents potential-induced degradation (PID), and contributes to the module?s structural integrity and durability, directly influencing performance longevity, safety certification compliance, and overall energy yield over the product?s operational lifespan.

The global Solar Pv Backsheets Film market size was estimated at USD 5960.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
