Abstracts

Solar PV Inverter is one power transfer apparatus, which is used to transfer the DC power generated through PV to AC power. For the reverse process of rectification, the apparatus is so called "inverter". When solar cells are disposed in sunlight, it produces direct current. However the supply system in the form of DC power has an extremely limited. For example, fluorescent lamps, televisions, refrigerators, electric fans and so on cannot be used directly with DC power supply, and most electric machinery are as well. In addition, when the power supply needs to increase voltage or lower voltage, it is simply adding a Transformer in AC power system, while lifting technology of voltage in a DC system is much more complex. Therefore, in addition to direct use of communications, weather and Others special DC power users, the production of electricity need to be equipped with a Solar PV Inverter in PV systems. It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply chain have exceeded 80%. Among them, the production capacity of silicon wafers, solar cells, and components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar Energy Industries Association (SEIA), the US held a new PV installed capacity of less

than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.100 GW.

The global Solar PV Inverters market size was estimated at USD 6694.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
