Report Overview

A solar photovoltaic (PV) tracker is a device that orients solar panels or heliostats toward the Sun. A solar PV tracker is used in solar panels, heliostats, and parabolic troughs to align them in such a position toward the sun so as to collect solar energy in the most optimal angle, thereby increasing the efficiency of PV systems. Fixed-mounted solar panels may lose their efficiency when the Sun passes to the less than optimal angle. A solar tracker system tracks the position of the Sun and moves solar panels such that they align accurately with the position of the Sun.

The increasing investment on renewables and rising installation of solar PV systems will provide traction to the solar PV technology in the solar tracking system market. The demand for the solar PV technology is influenced by the growing population and rising demand for electricity. Utility segment is the primary end-user of solar PV trackers to increase their efficiency in generating electricity.
