Abstracts

Solar photovoltaic (PV) tracking brackets are mechanical support structures designed to orient solar panels to follow the sun's path throughout the day, maximizing energy capture by optimizing the angle of incidence between the panels and sunlight; these systems can be classified into single-axis trackers, which follow the sun from east to west, and dual-axis trackers, which also adjust for seasonal variations in the sun's elevation, and their adoption is driven by the need to increase the efficiency and energy yield of solar installations, particularly in utility-scale and large commercial projects where even marginal gains in output translate to significant financial and operational benefits over the system's lifetime.

The global Solar Pv Tracking Bracket market size was estimated at USD 2384.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
