## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solar Single-core Cable competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Solar Single-core Cable production reached approximately 6,520,000 kilometers with an average global market price of around US\$ 0.65 per meter, a single-line production capacity of approximately 2,500 km/year, and a gross profit margin of approximately 18%. Solar Single-core Cable is a specialized electrical cable designed for photovoltaic (PV) systems, featuring a single conductor structure to transmit direct current (DC) power between solar panels, combiner boxes, inverters, and other electrical components. The conductor is typically made of high-purity tinned copper to ensure excellent conductivity and resistance to corrosion. The insulation and sheath are usually manufactured from cross-linked polyolefin (XLPO) or low-smoke halogen-free flame-retardant materials, providing superior resistance to UV radiation, high temperatures, weathering, and mechanical stress, which enables long-term reliable performance in harsh outdoor environments.

The global Solar Single-core Cable market size was estimated at USD 4238.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
