Abstracts

Solar smart city furniture is an innovative product that combines solar technology with smart city furniture. It not only has the practical functions of traditional urban furniture, but also achieves energy self-sufficiency and environmental sustainability by integrating solar charging and power supply systems. This type of furniture uses solar panels to collect sunlight and convert it into electrical energy to provide power support for the intelligent functions of the furniture. For example, solar smart seats can provide mobile phone charging services to citizens, solar lighting fixtures can illuminate city streets at night, and solar bus stop signs can display bus information in real time and provide free Wi-Fi services. The emergence of Solar smart city furniture not only improves the intelligence level of urban furniture, but also contributes to the environmental protection and sustainable development of the city. It reduces dependence on traditional electricity, reduces energy consumption and environmental pollution, and at the same time improves the quality of life of citizens and the image of the city. In the future, with the continuous advancement of solar energy technology and the further advancement of smart city construction, Solar smart city furniture will play a greater role in urban management and provide citizens with more convenient, comfortable and intelligent public services.
