Report Overview

String inverters have the benefit of being a short-term cheaper solution due to the lower equipment need compared to microinverters. One string inverter can handle the energy produced from a row of 5-10 panels. Therefore you can save on the upfront equipment cost by buying one string inverter instead of 5-10 microinverters. However, the long-term costs associated with string inverters far outweigh the benefits.

The global Solar String Inverter market size was estimated at USD 1205.57 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
