The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Solar Taxiway Light competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Solar Taxiway Light production reached approximately 3000 k units with an average global market price of around US\$ 50 per unit, a single-line production capacity of approximately 50,000 units/year, and a gross profit margin of approximately 10%-30%. Solar Taxiway Light is an airfield lighting fixture designed to provide safe and reliable illumination for taxiways using solar energy as its primary power source. These lights are typically equipped with high-efficiency LED modules and integrated photovoltaic panels that charge onboard batteries during daylight hours, enabling autonomous operation at night or in low-visibility conditions. Solar taxiway lights are available in surface-mounted, inset, or elevated configurations, allowing for flexible installation based on runway or taxiway design, aircraft traffic, and environmental conditions. The Solar Taxiway Light industry comprises upstream suppliers of key components such as LED modules, solar panels, batteries, optics, and housing materials; midstream manufacturers and integrators who assemble, test, and certify complete lighting fixtures with integrated solar power and control systems; and downstream end-users including airports, civil aviation authorities, and maintenance contractors responsible for installation, operation, and upkeep. This supply chain ensures that solar taxiway lights provide reliable, energy-efficient, and low-maintenance illumination for taxiways, particularly in remote, temporary, or low-traffic airfield environments.

The global Solar Taxiway Light market size was estimated at USD 152.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the
