Report Overview

Solder flux is a chemical agent used in soldering to remove oxides from the metals being joined and to ensure a strong bond between the solder and the metal surfaces. It is typically applied to the joint before soldering to clean and prepare the surfaces for the solder to flow easily. Solder fluxes come in various forms such as liquid, paste, or gel, and they are essential in electronics manufacturing, plumbing, and metalwork industries. The effectiveness of solder flux in improving the quality of soldered joints makes it a crucial component in the soldering process.

The market for solder flux is experiencing steady growth due to several market trends and drivers.
