Report Overview

Soldering is the process of joining metallic surfaces together using a hot metal filler. In electronics, it is used to secure individual components to circuit boards. Solder material is a key element in any form of electronics construction where soldering is undertaken. It provides a mechanical and electrical joint that is essential to keep components in place once a circuit has been assembled. While the mechanical strength is important, it is also necessary to ensure that the soldered joint provides a good electrical connection is made between the two connections that require joining.
